## PERLA AWARDED HONORABLE MENTION AT WT AWARD IN MILAN

05/05/2014 - LED | Product News

The Perla was awarded the Honorable Mention by the WT Award 2014 during the Milan Design Week. This international award, in its 14th year, rewards products that distinguish themselves for their technological innovation, sustainable values, accessibility and contribution to a better quality of life. The Perla, an LED luminaire that offers high-quality performance and plays an important aesthetic role by night and by day, was chosen out of 60 products by a jury composed of members from competent institutions for the Sustainable category. The winning products were exhibited during the Milan Design Week.

The jury recognised the Perla as a symbol of energy saving technology for lighting towns and cities with a warm nocturnal ambience. In addition to the typical advantages of an LED solution: low energy consumption, improved visibility with white light and longer life, the Perla can be fitted with a scheduled dimming system, a Constant Light Output (CLO) or a complete remote Owllet management system to generate further energy savings and optimise maintenance management.

This is the 4th award for this innovative LED luminaire, which was awarded a star by the Design Observer label, the Innovation Prize for the Urban Development category by the 2009 Fair for Mayors and Local Authorities in France and the prize for Best Exterior Luminaire at the FOR LIGHT trade fair in the Czech Republic.
